– January
2020

Climate Diplomacy

Delegate for South Africa

Project analyzed climate fragility risks and its links to other conflict drivers and contextual pressures in sub-Saharan Africa, including climate-induced displacement and migration, the links between climate change and terrorism, energy and food security. The course was predominantly led online, with a three-day intensive workshop hosted in Yaoundé, Cameroon. As the delegate of South Africa, my responsibility was to research, write and present South Africa's position on the issue of climate security and how the UN should respond to the threats that climate change poses to the international community.

January – UK Aid Department for International Development (DFID)/Southern Africa Trust (SAT)
December 2019 Marine and Coastal Ecosystem-based Adaptation (EbA) to Climate Change for Enhanced Resilience in Southern Africa

Project Assistant

Project aimed at enhancing climate resilience in Southern Africa by strengthening the role of marine and coastal EbA in national climate responses, focussing on research, dialogue, policy alignment and capacity building, and supporting peer learning among the four focus countries: Tanzania, Mozambique, South Africa and the Seychelles. Responsible for assisting with research; writing and editing of country reports; organization and facilitation of capacity building workshops.

March – May Southern African Development Community (SADC) Secretariat
2019 SADC Blue Economy Strategy Plan

Project Assistant

The aim of the project was to provide background information needed to develop a SADC Blue Economy Strategy, which was compiled into a report and presented to the SADC Secretariat. The project entailed research into the current development state of the 'blue economy' in Southern Africa, opportunities for growth and existing or potential challenges to its development. I was responsible for collecting data on regional sea port capacities, fisheries industries, proven and unproven off-shore oil and gas reserves, opportunities for seabed mining, income generated from coastal tourism, as well as research into the membership of SADC countries to international treaties and agreements relating to the governance of ocean spaces and inland water ways.
